Pilot Term Sheet

Product	CargoSharks — digital freight platform
Prepared by	techpotions
Prepared for	`[Customer]`
Date	`[date]`
Valid until	`[30 days from date]`

> One page, because a pilot that needs a contract to explain it is not a pilot. Everything below is fixed. Nothing on this page is metered, and nothing on it renews by itself.

1. What this is

A **three-month paid pilot**, on your real jobs, on your real lanes, with your branding, in your own deployment. Not a demonstration environment and not a trial licence — the same software, the same database, the same documents you would run in production.

At the end of it you will know one thing that no demonstration can tell you: whether a job goes from enquiry to invoice without leaving the system, and whether your finance team can close a month off it.

2. Fee

List price	KWD 1,500 per month
Your price	**KWD 800 per month**, for three months
Total	**KWD 2,400**
Terms	Monthly in advance. Non-refundable.
Period	Three months **from go-live** — not from signature

The rate is a founding-customer rate, granted in exchange for §6. It is not the list price and it is not what the software costs.

The full KWD 2,400 is credited against your implementation fee if you proceed to production within 30 days of the pilot ending.

3. What is included

- Deployment in the region you choose, provisioned and operated by us

- Two entities, per-branch users, roles and permissions
- Migration of your customers, contacts, agents, hauliers, ports and places
- Your branding applied end to end — screens, portal, documents, letterhead
- One rate card imported; milestone templates matched to your vocabulary
- Document templates: invoice, quotation, house bill of lading and air waybill, delivery order, packing list, customs pack, manifest
- Public tracking page and customer portal, both bilingual
- Training: two sessions per role
- Support throughout, from a named person, not a ticket queue
- **Three change-request days per month** — see §5

---

4. What is not included

New modules, new integrations, new document types	Quoted separately
Accounting-package integration	Quoted per package
Cleaning an unusable rate card	`[KWD ###]`/day — the effort is unbounded until seen
Migration of open jobs and open receivables	A cutover, not an installation. Quoted separately.
On-site presence outside `[Kuwait]`	At cost

Three capabilities are **deliberately not in this release** and are not being sold to you as though they were:

- **Intake from WhatsApp.** Enquiries emailed to a branch mailbox are read into a proposal your coordinator accepts or rejects; anything that arrives on WhatsApp is keyed in. We would rather say so than have you discover it in week two.
- **Live carrier tracking.** The connection to Maersk, Hapag-Lloyd and CMA CGM is built but runs on your own carrier API credentials. Until you hold them, milestones are entered by hand.
- **Direct customs filing.** Declaration references, dates, duty and SLA are tracked and the customs pack is generated. The broker still files.

---

5. Change requests

Bug fixes and configuration changes are not change requests and do not consume days — those are simply support.

A change request is new work: a screen, a document, a field, a report. You get **three days per month**, rolling, up to a maximum of six carried at any time. Anything beyond that is quoted before it starts.

This clause exists to protect both sides. Without a number, "continuous improvement" becomes an argument in month three.

---

6. What we ask in return

The rate in §2 is granted for these, and they form part of the agreement:

1. **Named reference.** We may name you as a customer, publish a short case study, and put you in front of prospects for a phone call — no more than `[four]` per year, at your convenience.
2. **Message corpus.** Permission to use your enquiry emails and WhatsApp messages, **de-identified**, to build and evaluate automatic intake. This is the feature you most want and it cannot be built without real messages. Your commercial data is never used for any other purpose and never leaves your deployment for any other reason.
3. **Two introductions** to forwarders in your network.
4. **A named owner on your side** who can make decisions in one meeting.

---

7. What "it worked" means

Agreed now, in writing, so that neither side argues about it in month three:

#	TEST
1	A job runs enquiry → quotation → award → execution → documents → invoice without leaving the system
2	Finance closes one calendar month from the system's figures
3	Your customers can see their own shipments without telephoning your office
4	Both languages work on every screen your staff actually use

Month one goes to migration, branding and training. You are really judging the product on months two and three — that is normal, and it is worth expecting.

---

8. Afterwards

Implementation	`[KWD 10,000]` fixed — less the KWD 2,400 already paid
Subscription	`[KWD 750]` per month
Extension of the pilot	Month four onward at list, KWD 1,500

Nothing renews automatically. If you do nothing at the end of month three, the pilot ends and your data is exported to you in open formats.

Not priced per shipment, ever. Volume pricing punishes you for growing and makes your bill unforecastable. Your bill is the same in a quiet month.

---

9. Payment

WHEN	AMOUNT
On signature	KWD 800
Start of month two	KWD 800
Start of month three	KWD 800
